Installer Menu

Touch the centre of the display to activate, then touch the ⚒ symbol for 2 seconds
Touch the ⚒ and ↩ buttons simultaneously the ↩ symbol is extinguished [C000] is displayed on the left side.
Use the ➖➕ button until [0015] is visible on the display, then tap the ⚒ button parameter [P001] will now be displayed.
Use the ➖➕ button to adjust the parameter to the required value then press the ⚒ button to move to the next parameter.
Once the required parameters have been adjusted, touch the ↩ key to save the values [P] will be displayed to confirm.

MENU	PARAMETER MODE	RANGE	REC	DEFAULT	NOTES
P001	Boiler type	0 to 3	0	0	0 = Combi 1 = Boiler + Cylinder (PDHW X-Plan) 2 = DHW heater only 3 = System boiler
P010*	Set maximum central heating output	25 to 100	See notes	See notes	Default 75% = 36 kW model 100% = 24 & 30 kW models
P030	Central heating pump setting	0 to 3	0	0	0 = Pump overrun active 1 = Pump continuous (DHW function off)
P031	Maximum capacity of modulating central heating pump	15 to 100	65	65	Displayed as %
P032	Minimum capacity of modulating central heating pump	15 to 100	35	35	Displayed as %
P033	Central heating pump overrun after heating demand	0 to 15	1	1	Time in minutes
P034	Central heating pump overrun after DHW production	0 to 15	1	1	Time in minutes (N/A for Combination boiler)
P035	Pump step modulation	0 to 1	1	1	0 = Off 1 = On
P036	Anti-Cycle time central heating	0 to 15	5	5	Active after target temp achieved / burner off
P040	Activate clock program CH operation	0 to 1	As required	1	0 = Inactive 1 = Active
P057	Response for OpenTherm room thermostat	1 to 3	1	1	0 = Do not respond to heat demand if requested temp is < 30°C 1 = Respond to CH demand with minimum flow temp limited at 30°C 2 = Respond to CH demand with a max set flow temp (on/off function)
P059	Maximum setting value of flow temperature	10 to 90	80	80	Displayed in °C
P070	Maximum DHW output	20 to 100	100	100	Displayed as %
P074	Number of ECO days	0 to 10	7	7	0 = controlled via OpenTherm 1 to 10 absolute days
P075	Control temperature during boiler operation	60 to 90	75	75	Displayed in °C (when heating an external hot water cylinder)
P077	Waiting time central heating demand after DHW	0 to 15	0	0	Displayed in minutes
P081	Setting of 3 - way valve or electric shut-off valve		0	1	0 = Powered during CH demand 1 = Powered during DHW operation
P087	Activate clock program DHW operation		0	0	0 = Inactive 1 = Active

P010*	Desired central heating output in kW		24	30	36	Note: The output during combustion will be slowly increased and decreased as soon as the set flow temperature is achieved. Output is directly related to the setting of P009
	(approximately)	100%	13.8	19.4	25.7	
		75%	10.6	14.6	19.3	(Modulation on temperature flow)
		50%	7.3	9.8	12.8	
		35%	5.4	7.0	9.0	
		25%	-	5.1	6.4	

XCLUSIVE & XTREME BOILER RANGE

Lockout Codes

| LOCKOUT CODES		POSSIBLE CAUSE & SOLUTION (REFER TO THE INSTALLATION MANUAL)
F000	Sensor S0 is defective	• Replace heat exchanger sensor S0
F001	Temperature is too high during central heating demand	• Air in system (Vent the heating to purge out air) • Pump not operating (Check the power supply, free impellor or replace the pump) • Check the wiring to the CH flow sensor S1 (To ensure it's connected and not damaged) • Check the CH flow sensor S1 (Is located and installed correctly) • Check for the correct operation of the central heating flow sensor S1 • Replace central heating sensor S1
F002	Temperature is too high during DHW demand	• Check the wiring to the DHW sensor S3 (To ensure it's connected and not damaged) • Check the DHW sensor S3 (Is located and installed correctly) • Check for the correct operation of the domestic hot water sensor S3 • Replace domestic hot water sensor S3
F003	Flue gas temperature is too high	• Check the heat exchanger for contamination or restrictions
F004	No flame during start up	• Gas isolation valve is closed or no gas supply • Gas working inlet pressure below 17 mbar (20 mbar recommended) • Check to ensure the condensate drain or trap is not blocked • Check ignition module, ignition lead or electrode including spark gap • Check electrical supply to ignition module or gas valve • Poor earth to ionisation probe or boiler
F005	Flame failure during normal operation	• Check to ensure the condensate drain or trap is not blocked • Gas working inlet pressure below 17 mbar (20 mbar recommended) • Check ignition module, ignition lead or electrode including spark gap • Check adjustment of gas valve (See the manual for CO_2 values) • Check the flue integrity for possible recirculation or blockages • Poor earth to ionisation probe or boiler
F006	Flame simulation	• Check or replace the gas valve
F007	No or insufficient ionisation current	• Check the ionisation / Ignition probe is clean and correctly located • Check the wiring to the ionisation / ignition electrode • Replace the ionisation / ignition electrode
F008	Incorrect fan speed detected	• Check fan wiring • Check or replace fan assembly • Replace PCB
F009	Internal burner control fault	• Replace PCB
F010	S0 Sensor fault - Top left of heat exchanger	• Check the wiring to the heat exchanger sensor S0 (To ensure its connected and not damaged) • Check the sensor resistances are correct
F011	S0 Sensor fault - Top left of heat exchanger	• Check or replace the S0 sensor
F012	S5 Sensor fault - (Flue gas sensor)	• Check the wiring to the flue gas sensor S5 (To ensure its connected and not damaged) • Check the sensor resistances are correct • Check or replace the S5 sensor
F014	S0 sensor mounting fault	• Heat exchanger sensor S0 not mounted correctly, locate sensor and attach correctly
F015	S1 sensor mounting fault - (Flow temperature sensor)	• Central heating sensor S1 not mounted correctly, locate sensor and attach correctly
F016	S3 sensor mounting fault - (DHW temperature sensor)	• Domestic hot water sensor S3 not mounted correctly, locate sensor and attach correctly
F018	Flue and or air supply duct blockage or restriction	• Check or clean the flue / air ducts including seals or gaskets
F019	BMM fault (PCB Memory card)	• Check the wiring or connector plug onto the memory card / possibly replace the card
F027	S6 outside weather sensor fault	• Check the wiring to the outside sensor S6 or the sensor for faults replace if necessary
F028	Reset error	• Check the reset button for unintentional operation e.g. when cleaning the fascia / or replace the PCB
F029	Gas valve fault	• Check the wiring to the gas valve or resistance of the coil If OK replace the PCB
F030	S3 sensor fault - DHW temperature sensor	• Check the wiring to the DHW sensor S3 or check the sensor resistances, replace if faulty
F031	S1 sensor fault - Flow temperature sensor	• Check the wiring to the flow sensor S1 or check the sensor resistances, replace if faulty
