

Intouch by Intergas transforms your smartphone into a **smart thermostat!**

Always and everywhere insight into and control over your boiler!

Letting you control your home's temperature and creating a week schedule from your smartphone are just two of the many possibilities of Intouch. Apart from remotely controlling the thermostat Intouch also provides insight into the performance of the boiler. Furthermore if so required Intouch can connect the consumer directly to the installer. With the help of the special Intouch service app the installer can monitor and read-out the boiler and, if needed, adjust and alter the parameter settings. Apart from these functionalities the service app incorporates a comprehensive service tool.

How does it work?

The Intergas Intouch system uses the users own home network. The only component needed, apart from the Intouch set and app, is a Honeywell Round Modulation T87M2018 thermostat and a free Ethernet port to connect the LAN2RF gateway. Intouch can be combined with all Combi Compact ECO RF boilers from 2014.

a. Smartphone

b. Lan2rf gateway is connected by means of a cable to the router

c. The boiler and lan2rf must be coupled to each other just once

d. The lan2rf gateway communicates directly with the Intergas boiler

e. The boiler communicates directly with the room thermostat

All boilers from all your customers in one app

Remote diagnostics

Change parameter settings remotely

Direct messaging in case of possible faults

Online service tool for all boiler types

intouch[®] round

- * free app (available in App Store and Google Play)
- * LAN2RF gateway
- * Ethernet cable
- * Mains adapter
- * Assembly materials
- * Installation manual
- * Honeywell Round T87M2018

Which thermostats are suitable?

The Intergas intouch system can be combined with a thermostat working with the opentherm protocol. It is important that the thermostat is able to support the fact that the setpoint is being determined by the boiler. The speed of communication between the intouch set and the room thermostat is dependent on the type of room

thermostat that is being used. It is also possible that not all functions of existing opentherm room thermostats are being supported by the intouch set. To ensure that the intouch set combines optimally with the room thermostat we recommend using the Honeywell Round T87M2018.
